

## **ASSIGNMENT 5**

**DATE: 11-06-2024**

### **1.Two sum**

```
def two_sum(n, target):  
    index = {}  
    for i, num in enumerate(n):  
        complement = target - num  
        if complement in index:  
            return [index[complement], i]  
        index[num] = i
```

```
n = [2, 7, 11, 15]  
target = 9  
print(two_sum(n,target))
```

### **2.Add two numbers**

```
class ListNode:  
    def __init__(self, val=0, next=None):  
        self.val = val  
        self.next = next
```

```
def addTwoNumbers(l1, l2):  
    dummy = ListNode(0)  
    current = dummy  
    carry = 0
```

```
    while l1 or l2 or carry:
```

```

sum_val = (l1.val if l1 else 0) + (l2.val if l2 else 0) + carry
carry, val = divmod(sum_val, 10)
current.next = ListNode(val)
current = current.next
l1 = l1.next if l1 else None
l2 = l2.next if l2 else None

return dummy.next

l1 = ListNode(2, ListNode(4, ListNode(3)))
l2 = ListNode(5, ListNode(6, ListNode(4)))
result = addTwoNumbers(l1, l2)

while result:
    print(result.val, end=" ")
    result = result.next

```

### 3.Longest substring

```

def longest_substring(s: str) -> int:
    char_index_map = {}
    start = max_length = 0
    for end, char in enumerate(s):
        if char in char_index_map and char_index_map[char] >= start:
            start = char_index_map[char] + 1
        char_index_map[char] = end
        max_length = max(max_length, end - start + 1)
    return max_length

s = "abcabcbb"

```

```
print(longest_substring(s))
```

#### **4. Median of sorted arrays**

```
def findMedianSortedArrays(n1, n2):  
    nums = sorted(n1 + n2)  
    n = len(nums)  
    if n % 2 == 1:  
        return nums[n // 2]  
    else:  
        return (nums[n // 2 - 1] + nums[n // 2]) / 2.0  
  
n1 = [1, 3]  
n2 = [2]  
print(findMedianSortedArrays(n1, n2))
```

#### **5. Longest palindrome substring**

```
def longest_palindromic_substring(s):  
    def is_palindrome(s):  
        return s == s[::-1]  
  
    longest_palindrome = ""  
    for i in range(len(s)):  
        for j in range(i, len(s)):  
            substring = s[i:j+1]  
            if is_palindrome(substring) and len(substring) >  
len(longest_palindrome):  
                longest_palindrome = substring  
    return longest_palindrome  
  
s = "babad"  
print(longest_palindromic_substring(s))
```

## 6.Zigzag

```
def convert(s: str, numRows: int) -> str:
    if numRows == 1 or numRows >= len(s):
        return s
    rows = [""] * numRows
    row, step = 0, -1
    for char in s:
        rows[row] += char
        if row == 0 or row == numRows - 1:
            step = -step
        row += step
    return ".join(rows)
input = "PAYPALISHIRING"
num_rows = 3
print(convert(input, num_rows))
```

## 7.Reverse number

```
num=1234
rev=0
while num!=0:
    rem=num%10
    rev=rev*10+rem
    num//=10
print(rev)
```

## **8.String to integer**

```
str="42"  
print(int(str))
```

## **9.Palindrome or not**

```
num=127  
temp=num  
rev=0  
while num>0:  
    rem=num%10  
    rev=rev*10+rem  
    num=num//10  
if temp==rev:  
    print("palindrome")  
else:  
    print("not palindrome")
```

## **10.Regular expression matching**

```
p = "aa"  
s = "a"  
p = r"{}".format(p)  
p = re.compile(p)  
if p.fullmatch(s):  
    print("true")  
else:  
    print("false")
```
